

# JL/Gladiator Grab Handle

## *Installation Instructions*

Your new Grab Handle is secured to the roll bar using the screws that hold the plastic trim to the roll bar. Slide the straps over the roll bar, remove the two screws holding the plastic trim, insert the screws through the grommets and back into their original holes. The screws require a T-25 Torx driver.

For installation over the front door, fold the strap over as shown at right and insert the screw through both grommets before reinstalling the screws.

For installation over the back door, insert the screw through the grommets closest to the end of the straps. The straps do not need to be folded and the other grommets are unused as can be seen in the photo at right.
